OVERALL PROFILE

Developing Operator

Your profile is in a developing middle zone. Continued practice and targeted support can lift all three readiness axes.

COMPETENCY CARDS

The core readiness competencies measured in this survey

OPENNESS TO AI

Conditional Adopter

Willingness and energy to engage with AI in practical work.

Open to AI when the use case feels practical, relevant, and low-risk.

RISK POSTURE

Calibrated & Risk-Aware

Judgement and verification discipline when using AI outputs.

Approaches AI use with strong verification, judgement, and ethical awareness.

CAPABILITY

NARRATIVE INSIGHTS

Developing

Practical use and confidence using AI in role-relevant work.

Shows emerging ability, but still needs practice to use AI consistently and well.

Early Adopter

You embrace AI with enthusiasm and curiosity. You are likely among the first to try new tools and advocate for their use. Channel this energy into helping colleagues navigate the transition alongside you.

Calibrated & Risk-Aware

You demonstrate strong awareness of AI risks and are able to weigh them appropriately against the benefits. This calibrated posture is a significant asset — use it to guide your team or organisation toward safer AI adoption practices.

Confident & Skilled

You demonstrate strong practical capability with AI tools. You can apply AI effectively across a range of contexts and are well-positioned to take on more advanced applications or support others in your organisation.

DEVELOPMENT RECOMMENDATIONS

Continue strengthening all three axes with targeted, role-specific development.

Measure progress over time to move from moderate to high capability.

Use practical feedback loops to improve confidence, judgement, and outcomes.
